Wyoming.com Announces Major Wireless NextGen Project for Northern Fremont County, WY

Riverton, WY (February 19, 2014) – The Wyoming-based Internet, phone, and data network service provider announced today that it has recently launched a complete Wireless network replacement project for northern Fremont County. The largest fixed Wireless Internet network in Fremont County will be enhanced with new technology, new equipment at ten towers, seven new towers will be added, and the entire network capacity will increase by 700%.

The Company's Wireless NextGen project was necessary due to steady growth in its customer base, customers' growing Internet Bandwidth and phone usage, plus increasing demand for affordable broadband and phone services in underserved areas of rural Fremont County. The Company has hired Cerento, Inc., for the engineering design, procurement and construction portions of the project, and some construction is to begin later this week.

"Part of this project is to add a lot more capacity for our current and future Internet and Phone customers", Chris Robisch, Director of Sales, Marketing and Public Policy noted. "Bandwidth demand has increased dramatically and we're building a network with the next generation of gear that can accommodate that growth for years to come, and then some. This changes the game for Wireless Internet services in western Wyoming."

While increasing network capacity was the first goal, the Company's long-range goal of larger, faster Internet services to the rural customers of northern Fremont County will also be realized through this project. "The demand for even faster Internet is there right now; especially in rural areas that do not have much of a choice today", Mitch Benson, President stated. "This network will bring real speed to those who want it and it will have that large capacity for future growth. It also will deliver our WyoPhone to new areas where traditional phone services are too expensive."

"This network project is a massive undertaking and planning actually began last year", Robisch added, "and we're excited about it. We think it's a great step forward for Fremont County." The Company will publish progress reports as it moves forward with this project. "This is an important step for northern Fremont County and we will keep everyone informed as we meet our project milestones", Robisch concluded.

Wyoming.com is the largest independent ISP in Wyoming, with thousands of business and residential customers across the state. The company currently provides Voice (WyoPhone), Data, and Internet services on its own EtherLink and other high-capacity connections, DSL, wireless, and dial-up access. The cornerstone of the company's operational philosophy is to provide customers, large and small, with unique, stable, highly individualized products and services. This philosophy has led to Wyoming.com emerging as the premier service provider in Wyoming. As Wyoming's leading Internet service pioneer, it began providing service in Riverton, Wyoming in 1994.
