## Wyoming.com Provides Wireless NextGen Project Status Report

**Riverton, WY (March 27, 2014)** – The Wyoming-based Internet, phone, and data network service provider provided a project status report today for its recently launched Wireless NextGen Project – northern Fremont County. The largest fixed Wireless Internet network in Fremont County will be enhanced with new technology, new equipment at ten towers, seven new towers will be added, and the entire network capacity will increase by 700%. This major project has been contracted to Cerento, Inc., for the engineering design, equipment procurement and construction phases.

“Work on eleven of the seventeen towers is well underway”, reported Chris Robisch, Director of Sales and Marketing. “The engineering design is complete and equipment has been ordered; 53% of that equipment has been received.” The Company’s Wireless NextGen project is necessary due to steady growth in its customer base, customers’ growing Internet Bandwidth and phone usage, plus increasing demand for affordable broadband and phone services in underserved areas of rural Fremont County.

“This demand – present and future – is one of the reasons that the engineering design phase is so critical. We’re excited to see that portion of the project, for these eleven towers, completed”, Robisch added. Upon full receipt of all equipment, the Company can then begin construction for the eleven towers. “In fact, construction work packages are being developed now as we’re waiting for the last half of the gear to arrive”, Robisch noted.

Infrastructure projects of this size normally take a great deal of planning and coordination, as well as the time necessary to put it together correctly. “We are hearing the demand - from the marketplace - for us to get NextGen in place”, Mitch Benson, President stated. “They want this network in place soon. We understand that and are meeting our timelines with those folks in mind”.

“As we making progress on the Wireless NextGen build, we will continue to publish status reports on a regular basis”, Robisch added. “Next week, we’ll be able to provide some more details about the high-speed service packages we’ll be able to offer using the NextGen”.

Those interested in learning more about the Company’s Wireless NextGen are encouraged to visit the Press Room page of the Company’s website. The Company is also hosting a Customer Appreciation Day at its Riverton headquarters on Tuesday, April 1st where more information will be available.

*Wyoming.com is the largest independent ISP in Wyoming, with thousands of business and residential customers across the state. The company currently provides Voice (WyoPhone), Data, and Internet services on its own EtherLink and other high-capacity connections, DSL, wireless, and dial-up access. The cornerstone of the company’s operational philosophy is to provide customers, large and small, with unique, stable, highly individualized products and services. This philosophy has led to Wyoming.com emerging as the premier service provider in Wyoming. As Wyoming’s leading Internet service pioneer, it began providing service in Riverton, Wyoming in 1994.*
