## Wyoming.com Announces Open Wireless NextGen Service Areas; Initial Turn-Up Phase Continuing

**Riverton, WY (September 4, 2014)** – The Wyoming-based Internet, phone, and data network service provider announced today that it has recently opened five Wireless NextGen service areas as part of its large-scale broadband deployment project for northern Fremont County. The largest fixed Wireless Internet network in Fremont County is being enhanced with new technology, new equipment at ten towers, seven new towers have been added, and the entire network capacity increased by 700%.

“We have opened Wireless NextGen for many rural communities in the last few weeks and are continuing with other network core routes and service area turn-ups”, Chris Robisch, Director of Sales, Marketing and Public Policy said. “As we have added new access points to towers, and begun replacing our old wireless equipment with the NextGen gear at specific customer locations, it’s been exciting to see the power of NextGen brought to these communities.” The recently-opened five service areas include Pavillion and areas of rural Riverton to the west and north of downtown Riverton.

“This is the phase that northern Fremont County has been waiting for”, added Mitch Benson, President. “We are gaining momentum on this project now as we are performing speed upgrades for our existing customers and installing services to new customers.” The Company will continue to work its aggressive schedule for this turn-up phase covering more towers and communities. Frequent announcements to customers and the public are planned as more progress is made in the coming weeks.

“We will keep all in northern Fremont County apprised of our developments. You can expect to receive news on the opening of other service areas as they occur. Developments will be rapid”, continued Robisch. While increasing network capacity was the first goal, the Company’s long-range goal of larger, faster Internet services to the rural customers of northern Fremont County is happening through this project.

“We have released Wireless NextGen service packages and prices, which can be found on our website”, Robisch added. “Our waiting list for new installations is lengthy, and we’re making a lot of progress on that. We urge folks to review their options through our website, and get in touch with us as soon as possible”, Robisch added, “We also will be hosting the public for lunch at our NextGen Customer Appreciation Day on September 18<sup>th</sup>.”

The Company hired Cerento, Inc., for the engineering design, procurement and construction portions of the project.

*Wyoming.com is the largest independent ISP in Wyoming, with thousands of business and residential customers across the state. The company currently provides Voice (WyoPhone), Data, and Internet services on its own EtherLink and other high-capacity connections, DSL, wireless, and dial-up access. The cornerstone of the company’s operational philosophy is to provide customers, large and small, with unique, stable, highly individualized products and services. This philosophy has led to Wyoming.com emerging as the premier service provider in Wyoming. As Wyoming’s leading Internet service pioneer, it began providing service in Riverton, Wyoming in 1994.*
